

## Music Downloads For Zune - Questions You Should Ask And The Answers

One of the most popular searches on the Internet is music downloads for Zune. Your Zune player is an attractive, compact little gadget with a lot of storage space. Obviously you have to find affordable downloads for it, but before you start, get to know a few things which are to be kept in mind for your own good.

The first is how you want these music downloads for Zune. Are you willing to pay per song? Are you willing to pay at all? These are the first questions to answer.

If the answer to the first question is yes, you have plenty of options. You can find plenty of websites with huge databases that will give you music downloads for Zune, as long as you pay per download. However, this can be a very expensive option. When you look at the storage capacity, you will realize that to compile a collection, you will have to spend a fortune. Of course, if you have it, you are free to spend it.

If the answer to the second question is no, you are at the other end of the spectrum. The most obvious choice is P2P file sharing network. You can get as many songs as you want, completely free, from other users who upload these songs on the Net. However, you have no protection against corrupt files and infected files. This might end in your computer crashing, or, maybe worse, your glitzy gadget getting infected. In both cases, the consequences of your unprotected downloading can turn to be irreversible.

If you trust your computer's security software enough, you can opt for this. However, you have one more great option worth considering. There are sites that will let you download as much as you want after you pay once, a lifetime membership fee. At others, you have to download their conversion software, which will be charged, after which you will get a lifetime of free music downloads for Zune.

Before you start downloading, you have to do one more thing: check the format of the files and how extensive the database of the site you have chosen is. If the format you eventually get turns out to be incompatible with your Zune, you have wasted both time and money. If the database is not extensive enough, you may end up feeling disappointed as well.
