

## Seven Steps To Become A Plumber

Although plumbing is a well paid construction field, yet it fails to attract people. The main reason is that the working condition of a plumber is quite backbreaking. The work of a plumber mostly involves installing and repairing gas, it also involves repairing waste and water system for residential, as well as industrial complexes. To become a plumber it is important that you undergo training. The training may be a three or four year degree course or you can be trained to be a plumber at technical school. You can also get a formal or an informal apprenticeship in order to learn the tricks of the trade.

Whatever be the medium you chose, but one thing is for sure that to be a plumber you have to undergo training, it is not something that you can learn along the way while working, it is absolutely not fair to practice your bad plumbing skills at the expense of your customers. You can start plumbing only when you are trained and you know what you are doing.

There are seven steps which if followed can lead you to become a plumber.

### Step 1

Complete your high school and take up subjects such as math, shops, science and also vocational courses such as plumbing and blue print reading.

### Step 2:

Try and find out about local opportunities, you can seek the help of your guidance counsellor.

### Step 3:

You can find out all the current information on plumbing on the internet, search for them.

### Step 4:

In case you want to join the local plumber's union, all you have to do is to apply for a four year apprenticeship; this will give you 2000 hours of training and 216 hours of classroom work. It is a good opportunity to polish your talents but it is important to keep in mind that only one out of every 20 applicant is chosen here.

### Step 5:

You can consider attending a trade school, the biggest benefit of attending a trade school is that the school provides job placements for qualified students.

### Step 6:

Try and grab any contracts for plumbing, heating or air conditioning. It does not have to be a big contract, even a small contract where you work at the position of an assistant can give you exposure and on the job training.

### Step 7:

Find out about the licensing requirement in your locality.

Other things that you must keep in mind are that you should not consider opting for this profession until you are physically strong and have good stamina.

To try and experience what you are getting in to, it is a good idea to spend a day with the local plumber.

You must remember that union members have to pay one time initiation fees and also have monthly dues withdrawn from their pay.

Remember that construction related jobs are temporary in nature whereas a service company provides permanent job.
