

## Things You Should Consider When You Download Songs for Your Zune

Now that you have in your hands one of the best portable media player around, you should try to download songs for your Zune. The best thing is that you can practically get songs from all types of resources. This makes Zune so likeable to many fanatics.

When you download songs for your Zune over the internet, you have the option of pay or free sites. When you go into pay sites, you have two options again: pay per song or pay for a one time membership fee. Each of these download options have their perks and downfalls. You will know about them later on. However, before you start your song downloading spree, there are some things you need to consider.

Before you select music files for download, keep in mind the file formats that your player accepts. It basically accepts and reads MP3, WMA, and AAC file formats. If you can't find your favorite song in either of these formats, the best thing to do is to use software which will help you convert your song into a playable Zune format.

When you're looking to download songs for your Zune on the internet, you're better off downloading from pay sites. From the two payment options, sometimes a one time subscription fee can be better than individual payments per download. You save a lot more money on the former than on the latter option.

If you're wondering why you shouldn't settle for free sites, it's because it carries a high risk of potentially infecting your media player. A Zune player can be quite expensive and having it repaired and stripped from harmful virus can cost you more money. Free sites also carry illegal downloads which is all the more reason to stay away from it.

Then again, if legal issues don't seem to bother you, look at it in another way. There are a lot of faults when you download from free sites. These faults include mislabelling of songs and poor song quality. Your media player deserves the best in order for you to truly appreciate its features and capabilities.

If you want to save on money, you also have the option of ripping music from the CDs that you already have. Instead of carrying bulky CD players, why not opt to convert them into a playable format so that you can listen to it on your media player?
