

## Free spam blockers Vs Paid ones

Free spam blockers Vs, Paid ones are a topic that lurks at the back of your mind before opting for one. You may face the need of protecting your computer from the damages that spam can do to your computer. They not only occupy storage and memory space of the computer, but also spread viruses that can crash the whole system. It is best to avail the trial period to judge the type of spam blocker that suits your need.

### Free spam blockers Vs, Paid ones

It is becoming impossible to stop email spam for both internet users and online business owners. Spam not only eats away the storage and memory space of the computer, but also poses various other problems. They can force your ISP to disconnect your internet connection. The virus in the spam can slower down your machine and cause the whole system to crash. It can not only steal all your confidential information, but also delete completely from the computer all the files and documents that you have stored. Thus, the spam blockers play a very important role in protecting your computer from any such damages.

### A Free Trial before Purchasing

You can either buy a spam blocker or freely download it. Even though both are designed to perform the same function, yet there are some unique features and guarantee period that distinguishes a paid spam blocker from a free one. Be it paid or free, these anti spam software make use of anti spam programs to track spam. They are beneficial in avoiding phishing. You get a variety of this software like Spam Bully, Spam Inspector, and Zaep. The best part of free spam blockers is that you can easily update the version and keep your system up-to-date by downloading the new version. With paid spam blockers, you will have to buy them every time some new version is available to install it.

The Norton Anti Spam 2005 is a paid one that operates on almost all the platforms like Windows NT, Windows 2000, and Windows Me. They filter email on multiple levels and operate on POP3. Even in the toolbars of Outlook, Eudora and more, they add anti spam filter options. They not only block spasm but also pop-up ads. Another paid version is the Spam Alarm that filters in only the good messages against a huge load of messages. Most of the times the free spam blockers are effective in only blocking spam. In doing so, they may sometimes even block useful messages that they detect as spam. The paid ones cater to this need carefully and are often provided with anti-virus scan. Whatever spam blocker you use, it is best to use the trial first before installing it on your computer.
