

Cost For Tumescent Liposuction

Tumescent liposuction is a newer, popular procedure for fat removal. The cost of tumescent liposuction makes it so when compared to more traditional procedures.

Cost For Tumescent Liposuction

One of the forms of surgical sculpting for [fat removal](#) is the technique of tumescent liposuction, a procedure that limits bleeding with anesthesia fluid, which is pushed into the tissues with anesthetic effects lasting for several hours. Although, this surgery is able to reduce disreputably the pain, it often increases the surgical costs.

There is no "standard price" or estimate because the cost for tumescent liposuction depends on different factors, such as the size and number of the areas of the body to be treated. Cost of this procedure also varies from country to country, city to city and from doctor to doctor. The average cost for liposuction is nearly \$1800 per area, causing an additional cost of \$900 for additional zones.

When it comes to treating large areas requiring tumescent liposuction, additional costs are determined in terms of size and importance of the region to be treated. Generally, you will get an estimate after the first consultation so you can determine the affordability of the procedure.

The more fat your body has accumulated, the higher the cost to get it removed by means of tumescent liposuction. Contrary to other liposculpture procedures, tumescent liposuction requires an operating room to be scheduled, general anesthesia, or localized sedation, which costs are charged additionally and prices are determined on the extent of the procedure accordingly.

Tumescent liposuction has become the method of choice for liposuction surgery mainly because the adrenaline added in the solution limits the blood loss that is seen with traditional liposuction. There is no guarantee that secondary surgery may not be needed for any reason, but more often due to large areas being treated rather than complications because tumescent liposuction is considered safe.

In the case of undergoing a secondary surgery, which usually is more difficult, cost for tumescent liposuction increases considerably, charging 2 procedures and twice the use of the operating room, anesthesia, etc. Surgeons who perform the operation have also a remarkable fee variation, adding more and more costs, such as blood tests, and liposuction compression garments that should be wear after surgery.

The cost of tumescent liposuction is highly dependent upon the specific work you are having done. Speak with your cosmetic surgeon to understand the total cost including not only their fee, but the incidental costs.
