

What Customers for my Business Are on MySpace

MySpace is almost the oldest social networking site and it is definitely the largest. At least twice as many users profiles on MySpace than Ebay. Google used to be the most trafficked site on a daily basis but now that honor belongs to MySpace. You can use the tools that MySpace makes available to you to add friends, update your profile, send messages, comments, and bulletins. Plus you can even now have your own blog on MySpace. If you want to make these tasks easier and faster then you need to look at the third party tools that our out there.

The most basic function on MySpace is the ability to invite friends to be your friends. MySpace will allow you to request 50 friends per day without having to bypass CAPTCHA. A good friend adder can be just one of those sites that allow you too add 1,000's of friends at a time.

I just tried to use the profile updater on MySpace the other day. All I wanted to do was use it to add my graduating high school information. I tried doing this on MySpace 4 times and each time after clicking on save and update I would then click on home and I would see that my main page of my profile was still asking me to add my high school information. How many times must I enter this information in on MySpace for the change to actually take affect?

MySpace allows every profile on the site to have their own blog which is one of the fastest growing trends on the web today. I use a third part software to allow me to post to a blog from my desktop because when you have a browser open in can take up a lot of your systems resources. Very few if any MySpace Bots have a blog poster but if they do then this is a definite plus.

Let's say you are a member of a sorority and each student has a MySpace profile. Now to use the MySpace site each student would have to log onto their profile individually but some of these Bots allow you to do account chaining which means that if your group has 50 Profiles and you want to send a message to each profiles friends you can chain them all together so that the sending of messages is much faster and a lot less time consuming.

If you do a search on the web for MySpace Layouts or MySpace profiles you will see a lot of matches. Downloading and using one of these can become time consuming. When I am looking for a Bot I look for one that has a profile grabber. A Profile Grabber is a must have when you are looking for a MySpace Bot.

Now on MySpace you are only allowed to have one profile according to their TOS. What if you were a marketer and it was necessary to have multiple MySpace profiles? What kind of profile do you think will get the greatest number of visitors? Some of the great MySpace Bots out there have account creators for MySpace. I had my son get pictures of girls he knows and I use these pictures for all my profiles. The profile of the lesbians which showed 2 girls in the shower together in bikinis did great until MySpace deleted that profile.

With each profile when sending out messages you need to make sure that each profile sends out a different message otherwise MySpace will delete several accounts. You could look for a Bot that has a message randomizer which would be a fantastic solution for you. I have seen maybe a couple MySpace Bots that have the feature of a message randomizer.

MySpace as well as a lot of the other Social Networking sites now use what is referred to as a CAPTCHA code for the creating of accounts and some of them have this for message sending. A CAPTCHA code is a series of letters and/or numbers that appear on a small image. A person then needs to add the sequence of letters and numbers into the space provided in order to continue what they were doing. Some of the Bots used to have CAPTCHA bypass functions which were great because entering in these CAPTCHA's can be time consuming. Nowadays it is hard to find a bot that offers this and the ones that do charge a premium for this feature.

The only reason why you may not need software created by one of these third party developers is if all you want to do is add friends to one profile. You can have a separate piece of software for each function that you want to do but why would you? This can take up system resources as well as cost you more money than you need to spend. It is probably best to look for a MySpace Bot that is an all in one solution.

About the Author

Jeffrey A. Solochek is originally from Milwaukee, Wisconsin but now resides in Brunswick, Georgia. He is a known authority on his niches of life, business, and marketing. Mr Solochek has a lot of great experiences and he writes about everything leaving out any sugarcoating. All his writings contains [No BS, No Fluff](#)
