

Car Alarm Systems

Car Alarm Systems

Protect your car possible theft by installing the new age alarm systems in your car or other vehicles. The car alarm systems are affordable and ensure the safety of your car manifolds. For all of us, our car is an important investment that adds comfort to our lives. That is why, ensuring its safety should be our primary goal. And for this purpose, the car alarm systems come as a great boon to protect not only your investment but also to avoid the possible hassles that can be created if the car is stolen.

Gone are the times when the car security systems were affordable by the wealthy and elite due to the high cost of the systems then used. With the changing technologies, car alarm systems have become more affordable for millions of car drivers across the United States. This is why the car theft have gone down considerably, as no one dares to touch the protected vehicle. With the increased affordability, the car alarm systems have become highly popular and hundreds of thousands of car owners across the United States have opted for this system for securing their investment. Many manufacturers of the car alarm systems have come up with some of the outstanding products that are suitable to the common budgets. With the increased options the car alarm systems can be classified into various types and the most popular of them are:

Active Alarm Systems

These systems require the user to press the transmitter button that is a part of this system to arm and disarm the alarm system. There is a chance that if you set your alarm to arm passively you can probably get a discount on your insurance.

Passive Alarm Systems

More popular, these systems automatically enter an armed mode as soon as the ignition is turned off and the all the doors are closed.

While buying a car alarm system you should look for features that will guarantee the complete safety of your car. Some of the important car alarm features are listed below:

Feature#1

Active Re-arm: to prevent accidental disarming from the remote transmitter, if the alarm has been disarmed the system will automatically re-arm after a specified amount of time if a door is not opened.

Feature#2

Air Horns: are used to call more attention and cause panic to the intruder if he makes it inside the car.

Feature#3

Anti-Code Grabbing: a typical method employed to change the alarm code with every arm/disarm that ensures it to protect from the code grabber.

Feature#4

Carjack Protection: will cause the engine to turn off and the siren to blare, incase the vehicle is taken forcefully from the owner.

Feature#5

Emergency Disarm Switch: hidden and is used to disarm the alarm in case of an emergency.

Feature#6

Ignition Kill: will disconnect the ignition if the alarm is armed.

feature#7

Microwave Detectors: mostly popular with open vehicles these are proximity sensors that trigger when an object enters the sensors zone of protection.
