

These are the few tips to your website promotion that are working today.

The most important way to get more visitors and page views is to have interesting contents that get people to look at your pages.

If you don't have optimized your site or page for seo, do it with good seo tools! It's important for you, make your site easy for google.

Some secure ways to website promotion and get more views include:

1. signing up for social bookmarking services like del.icio.us, ma.gnolia, and digg and posting your pages;
2. posting blog on technorati (and on other important bloggers)
3. posting on track comments to blogs related to your topic with a profile that links to your page (technorati is good for finding these);
4. posting to forums related to your topic and including a link to your page in your signature;
5. submitting your page to search engines;
6. posting articles related to your page (if original is the best) to free article sites with a link in the resource box to your page.

If you are going to do all this work greatly!

These are few tips but is a great work in, help yourself with a good software for search engine optimization and website promotion.

I recommend doing it to promote a site or a landing page that has ads or affiliate links that will make you money or to a cause you believe in.

If you want to know how much work this , you keep track of the work with serious tracking software.

Good luck,
