

Dealing with Annoying Pop-ups, Viruses and Junk email

Companies spend billions of dollars each year combating spam. Billions more is spent with the loss of productivity, having to purchase additional equipment, software, and man hours filtering through unwanted spam, and fixing problems directly related from spam. Direct effects of spam are the consumption of network and computer resources, data and intellectual property theft, identity theft, infection from virus and malware infection, and more.

When most people think of spam, they are thinking of the unsolicited emails sitting in their inbox that is time consuming to clean up. However, there are many more different types of spam; instant messaging spam, chat spam, newsgroup and forum spam, even cell phone spam, blogs and guestbook spam, video sharing spam, video gaming spam, mail bombing, and non-commercial spam. Email and Internet spam is frustrating and sometimes embarrassing when pornography pops up in front of grandma.

Why would someone want to send out so many annoying messages or pop-ups and what is the benefit for a spammer? A spammer expects total profit and if even only small percentages of people respond or make a purchase from the spam message, the spammer stands to make a bunch of money. Other non-commercial spammers are criminals seeking banking information, committing fraud, and have even lured people to their own kidnappings and murders. Competitors might use spam as a denial of service to your website to flood the viewer of your website with a ton of pop-ups and make it impossible to view the site. This is another malicious way spammers attack.

So what can you do to protect your email and be able to surf the Internet without the unwanted pop-ups and phishing sites stealing your information? There are two solutions; Mozilla Firefox for your web browser and Anti-Spam Software for your email. These two solutions will provide the protection you need without having to worry anymore.

Having a positive Internet and email experience is what everyone wants. Mozilla wants this for everyone too. Mozilla is a non-profit organization who is dedicated to making your online experience incredible. They offer their web browser Firefox free of charge. Firefox is available to all Windows, Mac, and Linux platforms, in over 35 different languages. This web browser has integrated protection from spam, pop-ups, and phishing protection that tells you when you have accessed a website that is looking for information.

Mozilla Firefox is the leading web browser because they care about what the user wants. This browser allows you to personalize it the way you want it. Firefox includes a spell checker and search engine suggestions. It also includes a session restore so when you lose your Internet connection and have to sign online again, Firefox will take you back to the exact webpage from where your session terminated. That way, you don't have to spend hours finding where you were before. Firefox even has accessibility features that integrate with Microsoft's accessibility features in Windows for people with physical impairments to easily surf the web without having too many keystrokes to get to the site they want.

The best quality of Mozilla's Firefox is the protection. Unlike Internet Explorer, Firefox has a button to clear private data so the browser doesn't keep personal information. It also automatically updates itself. This is much better than having to go to Microsoft's website to install the latest security updates and patches.

Anti-Spam Software can be found at www.antispampage.com This useful tool provides the email protection you need with a user-friendly interface, which makes it simple to setup. Anti-spam software is learning software. This means, you teach it what is spam and what is not. Eventually, you will not be receiving anymore spam in your inbox. This software will block incoming spam before it even reaches your inbox and automatically delete malicious viruses. Anti-spam is compatible with Windows platforms 98, ME, 2000, and XP. 24-hour technical support is provided and 100% satisfaction or you are entitled to a full refund. Millions of users worldwide are using Anti-spam software and they couldn't be happier.

Don't allow unwanted spam, pop-ups, and phishing sites ruin your computing experience. Using a smart web browser like Mozilla Firefox and Anti-spam Software are the best ingredient for total protection on your computer.
