

Mobile Phones: Enjoy the beauty of technology

Our beautiful world is thriving with technology. Revolution in communication has transformed the world into a global village. A global village where we can stay connected day and night, share our emotions, feeling of oneness; strike business deals and generate growth. Technology has brought a new meaning into the lives of millions of people. People are experiencing a fast-paced life.

Mobile phone is the face of this IT-enabled world. Mobile phones have become a necessity for most of the people throughout the world. It is helping people to keep in touch with the family, business associates and also the facilities like "access your emails" have contributed to the overall development of human beings. In fact invention of mobile phones has transformed the way people communicate these days. It has made possible to stay connected with one's loved ones, friends and also with the business associates anywhere you go. Mobile phones has become a must have for everyone today. This is the sole reason why there has been continuous increase in the number of mobile users.

Today's cell phones with new advanced technology have changed for a better tomorrow. They have the capability of receiving and placing phone calls. Apart from this, it can store data, take pictures, play music and can even play the role of computers. These are just some of the available options. Now, cell phone reception has become reliable and of higher quality with the advancement in wireless technology. Wireless service providers offer excellent packages and promotions for cell phone users. Presently there has been tremendous improvement in technology with the coming of 2G and 3G phones.

The number of mobile making companies is on the rise and markets like UK is facing huge competition. Leading manufacturers of mobile phone handsets namely LG, Nokia, Samsung, Sony Ericsson and Motorola are continuously striving to make those handsets, which can soothe the requirements of mobile phone users. First, there was 1G or first generation technology but now it has lost in the pages of history. In modern times, third generation or 3G technology is ruling over the hearts and minds of mobile phone in UK. All the manufacturers are busy in producing mobile phones with latest 3G technology. Nokia has a wide range of 3G phones. Other companies like LG are not behind too. Customers are the real beneficiaries of competition.

The point to note is that with improvement in technology, the numbers of cell phone users have increased considerably throughout the world. At the moment, China has the distinction of having the largest number of cell phone users. On the other hand, India is a big market which hasn't been explored fully. The number of mobile phone users is growing at a quick pace. The scene is more or less the same in Africa. The markets of USA and Europe are vibrant. In USA and Europe, mobile companies are flooding the market with new technologies daily. The service providers are competing with each other to score points in value-added services. In the years to come, mobile phones will serve as a multi-tasking gadget like a Swiss army knife.

To end with, it can be said without any doubt that [mobile phones](#) have become the life-line of communication and a tool to generate more business across the globe.
