

The wide variety of industrial shelving

Many of the larger suppliers of industrial shelving will have large websites where you see the full range on offer, complete with the prices and dimensions. Such companies will usually have people you can talk to on the phone or in person. That way, you can fully discuss your needs and come up with a complete solution for your particular needs.

Circular shelving enables you to make use of areas that would not be possible with ordinary industrial shelving. This is because ordinary shelving wouldn't fit in the space. As a result, circular shelving can be very effective in warehouses, stores and counters where parts are sorted and assembled. Other industrial areas where circular shelving is useful include maintenance rooms and production areas.

Wire shelving systems are tough and hard wearing which makes them ideal for industrial shelving. This type of shelving usually comes in modular systems which can be added to later as the needs of the business change. They also come in many different sizes and so can accommodate the wide variety of different items that need to be stored in industrial operations. As they are made of wire, they are easy to keep clean because dirt and dust doesn't build up on them. And they are lighter too, which makes them easier to install and move around.

Mobile shelving systems are useful due to the flexibility they can bring to an industrial facility. As they can be moved around easily, mobile shelving systems allow a factory to be re-fitted very quickly as needs arise. So a new order can be handled much easier and without the need for buying in more industrial shelving and the delay involved in having it installed.

If you have the need for a system which can hold a lot of weight, your best choice is open style metal clip shelving and closed metal clip shelving, along with double rivet shelving. These can be put together and taken down easily. As a result they are a popular choice when you need to create a temporary area for storage or operations. Similar to many other types of industrial shelving, these are modular and so can be conveniently added to when the need arises.

There are some types of industrial shelving that include covers and doors which can be locked. This kind of shelving is used in situations where a controlled environment is needed.

Covered industrial shelving is used for sensitive electronic equipment. It also gives protection against accidental damage from factory workers, birds and falling items. This kind of industrial shelving is also good when a certain level of security is needed when storing valuable items, dangerous chemicals and electronic equipment.

Big Dug are a leading industrial supplier of [industrial shelving](#) and other industrial related products. Visit <http://www.bigdug.co.uk> for more information.

About the Author
