

## Why you should use Aquastations water coolers

Water is one of the world's most precious commodities and is vital to everyone's health and wellbeing. Experts recommend we all drink at least 8 glasses of water a day to keep ourselves healthy. Employers also have to provide drinking water for their staff under new regulations.

That's where Aquastations mains [water coolers](#) take centre stage. Aquastations, a water cooler supplier, was established in 2000 and is based in Hertfordshire, just outside London. They pride themselves on their excellent customer satisfaction record and competitive pricing. Aquastations provide a wide range of water coolers for both the workplace and home.

Mains water coolers are favoured by many businesses as they avoid the need for administration, ordering water and paying monthly invoices. The plumbed in water coolers filter mains water, providing staff with a constant supply of great tasting and chilled water. Aquastations can easily arrange for your current [bottled water cooler](#) to be replaced with a mains water cooler and at a great cost saving to you. You'll never have to lift or store heavy water bottles again and most importantly you'll never run out of water.

Aquastations will conduct a site visit at your premises to confirm that these water coolers can be used by your business. You will need a mains water supply and a plugpoint, but Aquastations will take care of the rest of your requirements. Aquastations provide plastic cups and holders and regular sanitisations of your machine. With one invoice a year and the peace of mind of a never ending water supply, Aquastations can ensure you and your staff get on with running your business.
